Notes:

The testing process was carried out in compliance to the WCAG 2.1 AA guidelines. The product was found to be overall partially supportive.

As a summary, there are some elements and functionalities that are not being supported such as list, table, state etc. However, the page is navigable, and, in most cases, there is a solution for the features that are not being supported.

Accessibility for Americans with Disabilities Act (ADA) website compliance requires all public and (large) private organizations to make their websites and web content conform with mandatory accessibility standards (WCAG 2.0). WCAG is simply a set of formal guidelines on how to develop accessible web content. These standards represent a higher level of accessibility than 508 standards, although they are identical or very similar. WCAG focuses primarily on HTML accessibility.
